Blood Meal

Lilly Miller BLOOD MEAL is the easy, natural way to add organic nitrogen whenever your garden plants need it. Use it anywhere plants need an extra helping of nitrogen for strong, sturdy growth and dark green foliage. Great for all flowering, foliage, and fruiting plants including annual and perennial flowers, bulbs, vegetables, roses, shrubs, trees, and plants in containers. Use Blood Meal to "heat up" compost piles, too.

HOW DO I USE THIS PRODUCT?

Apply Lilly Miller Blood Meal as directed below at planting time and again every 8 weeks as needed throughout the growing season to promote growth. Overfeeding flowering and fruiting plants can give you fewer blooms and smaller fruit with less flavor, so don't be tempted to "give it a little more."

Annual and perennial flowers, bulbs, and vegetables: For new plantings, apply 2 cups per 25 sq. ft. (5'x 5') or 25 ft. row. Mix into soil to a depth of 6 inches before planting. For individual plants or bulbs, mix 1 tablespoon into the soil at the bottom of the planting hole before you set in the plant. For established plants, apply 1 cup per 25 sq. ft. or 25 ft. row. Apply evenly around plants and gently scratch into the surrounding soil. Be careful not to damage roots. Water well after application.

Roses, shrubs, and trees: For new plantings, apply 1 cup per new rose or shrub. Use 2 cups for plants over 6 feet

tall. Mix into the soil at the bottom of the planting hole and into the backfill soil before planting. For established roses and shrubs, apply ½ cup in a ring around the plant, 6-12 inches from the trunk. For larger shrubs and trees, apply 1 cup at the drip line. Apply evenly around established plants and gently scratch into the surrounding soil. Be careful not to damage roots. Water well after application.

Container plants: Mix 1 tablespoon per gallon of soil used at planting. For planted containers, apply up to 2 tablespoons per gallon of soil. Gently scratch into soil well away from trunk. Be careful not to damage roots. Water well after application.

Compost piles: Add ½ cup Blood Meal per cubic foot of composting material to accelerate the composting process. Spread Blood Meal evenly between layers of leaves, grass, straw, and other composting materials. Water well after application.

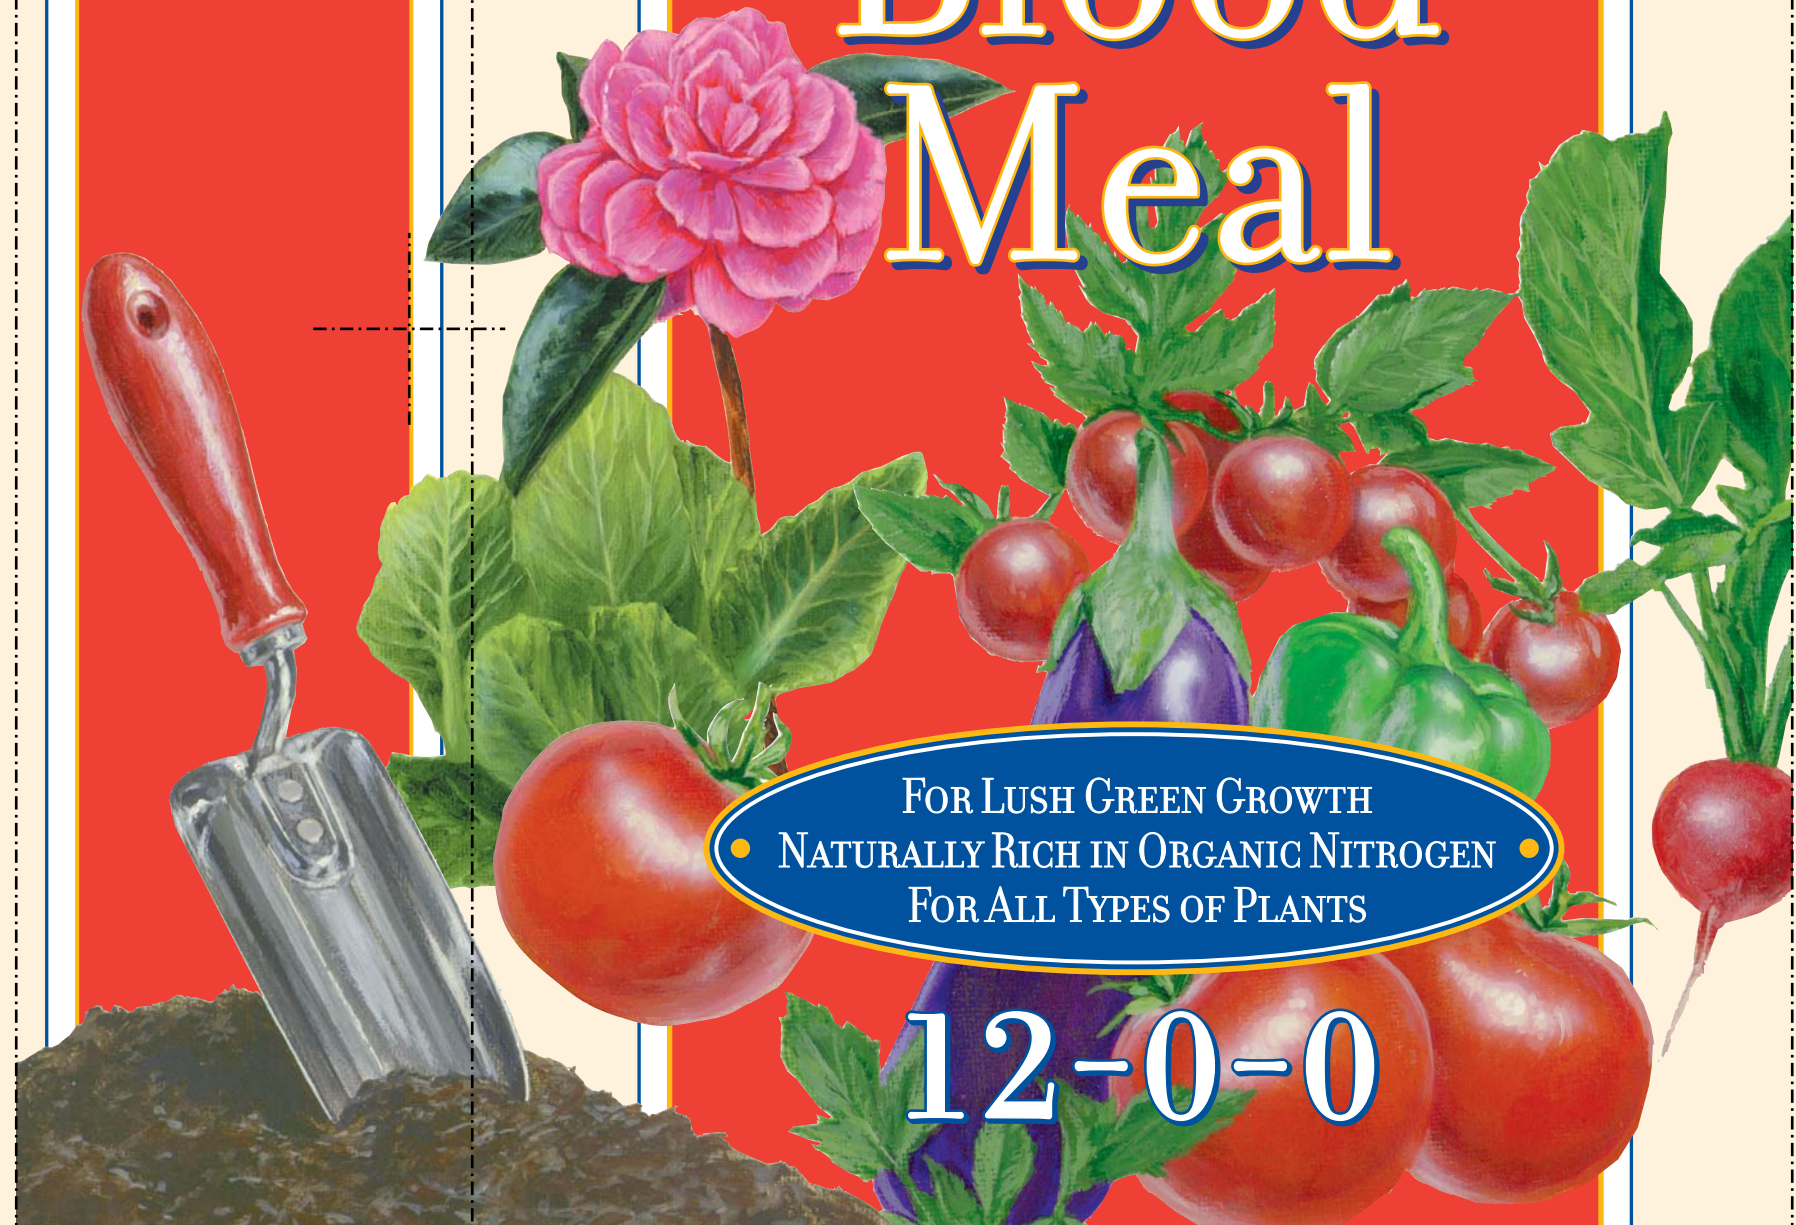

OUR COMMITMENT TO YOUR SATISFACTION: If you are not happy with the way this product works in your garden, please let us know. We will be happy to replace the product, refund your money, or substitute another Lilly Miller product. Simply send your name, address, and proof of purchase to the address shown.
