JOB #0000

LILLY MILLER® Non-Staining IRON SAFE®

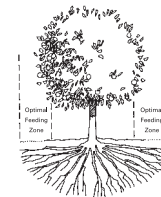

A lush, deep green color and lots of strong growth are the signs of a vigorous plant, whether in a tree, your lawn, or that head of lettuce. Extra iron can give your plants that beautiful color and keep it growing great. IronSafe® can be used effectively in all soil types, but is especially effective in high alkaline soils.

Plants everywhere can use the nutrients in IronSafe to grow and thrive. So, don't let your plants suffer without the micronutrients and nitrogen they need. Turn your yellowing, iron-starved plants green again with IronSafe.

IronSafe contains iron sucrate, a new form of iron for lawn and garden products. Iron sucrate is longer-lasting and more evenly-available than the iron in other products. Your lawns, trees, shrubs, vegetables, and flowers - in fact your whole yard - will stay greener longer with IronSafe.

WHERE TO USE: Use IronSafe on Lawns and Turf and around Ornamental and Evergreen Shrubs (roses, rhododendrons, azaleas, camellias, holly, juniper, pine, and many others), Flowers, Vegetables, Berries, Citrus Trees, Other Fruit, Ornamental or Shade Trees, and Hedges.

HOW TO USE: Apply IronSafe to established plants and lawns at the rate of 1 to 2 lbs. per 100 square feet (10 ft. x 10 ft.). Apply evenly to lawns and around plants, and under the dripline of shrubs. If possible, mix lightly into the soil without damaging plant roots. Water deeply after application. Ironsafe can be applied up to three times a year.
